Table of Contents

Dedication	v
Foreword	vii
Introduction	ix
1 OVERVIEW OF DISSOLUTION TESTING	1
Why Dissolution Testing?	2
Disintegration Testing	3
Evolution of Dissolution Testing	5
Development of Dissolution Testing Standards	12
Methods of Dissolution Testing	13
Basket Method	14
Paddle Method	14
Reciprocating Cylinder Apparatus	14
Flow-Through Methods	14
Transdermal Drug Release Testing	15
Classification of Dissolution Techniques	15
Agitation Methods and Hydrodynamics	16
Rotating Stirrer	16
Reciprocating	16
Fluid Movement	16
Perculaneous Absorption	10
Defining an Apparatus Data of USD in Dissolution Tosting	10
Role of USP in Dissolution Testing	17
Role of FDA in Dissolution Testing	1/
Kelerences	18
2 THEORETICAL CONSIDERATIONS	21
Definition of the Dissolution Rate	21
Intrinsic and Apparent Dissolution	21
USP <1087> Intrinsic Dissolution	23
Surface Area and Particle Size	24
Surface Area and Flow Dynamics	26
Solubility	29

Sink Conditions	30
Input and Output Variables	30
Beyond Dissolution	32
References	32
3 COMPENDIAL DISSOLUTION TESTING OF	
SOLID DOSAGE FORMS	35
Introduction to Current Methods	35
The Basket (USP Apparatus 1)	39
Basket Specifications	39
Basket Variations	40
The Paddle (USP Apparatus 2)	42
Paddle Specifications	42
Paddle Variations	43
Compendial Constraints Common to Apparatus 1 and 2	48
Geometry and Angnment Eccentricity (Wobble)	48
Vertical Position of the Basket or Paddle	48
Stirring Rate	48
Vessel	49
Media	50
Sampling Point	50
Time	50
Apparatus Suitability Test	51
The Reciprocating Cylinder (USP Apparatus 3)	51
Reciprocating Cylinder Specifications	53
The Flow-Through Cell (USP Apparatus 4)	53
Flow-Through Cell Specifications	54
Summary Defense and	57
Kelerences	5/
4 DISSOLUTION TESTING OF SPECIAL DOSAGE FORMS	59
Transdermal Dosage Forms	59
Rate-Limiting Processes	60
Problems Unique to Transdermal Testing	61
Variables in Percutaneous Absorption Testing	61
Dissolution of Oral vs. Topical Dosage Forms	62
Paddle Over Disk (USP Apparatus 5)	64
Cylinder (USP Apparatus 6)	65
Reciprocating Holder (USP Apparatus 7)	66

Vertical Diffusion Cell	67
Immersion Cell	69
Suppository Basket	69
Special Dosage Form Recommendations	71
Oral Suspensions (Systemic Use)	71
Orally Disintegrating Tablets and Films	71
Sublingual Tablets	71
Chewable Tablets	72
Gastroretentive Tablets	72
Granules, Powders, or Pellets Administered with Food or Beverage	72
Lozenges	72
Medicated Feeds	73
Suppositories	73
Liquid-Filled Capsules	/3 72
Dowders Solid Solutions and Solid Dispersions	73
Implants and Micro, and Nano-Particulate Formulations	73
Summary	75

6 CONTROLLING DISSOLUTION APPARATUS	
VARIABILITY	101
	101
Eccentricity of Stirring Drive (Apparatus 1 and 2)	102
Shaft Straightness	105
Guiding the Shaft	105
Other Stirring Device Variables	105
Vibration	107
Sources of Vibration	108
Torsional Vibration	109
Geometry of Apparatus	110
Alignment of Stirring Device	110
Centering the Stirring Shaft in the Vessel	112
Agitation Rate	112
Apparatus 1 (Basket) Variables	113
Dissolution Media Variables - Dissolved Gas	115
Deaerating Media	116
Influence of Released Gases	118
Media Variables	119
рН	119
Volume	120
Temperature	120
Sink Conditions	121
Flow-Pattern and Vessel Hydrodynamics	122
Adsorption	124
Checklist for Variables and Following CMP	124
References	125
	143

7 PERFORMING THE DISSOLUTION TEST AND APPARATUS QUALIFICATION 131

Checklist for the Dissolution Test	131
Apparatus Maintenance and Qualification	141
Checklist for General Preventive Maintenance	142
Inspecting Paddles and Shafts	143
Checking Eccentricity of Paddles or Baskets	146
Checking Speed Control	147
Checking Vibration	147
Centering Vessels to the Stirring Element Shaft	148
Distance of Stirring Element from Bottom of Vessel	148
Dissolution Apparatus Qualification	150
USP Performance Verification Test	151
Compendial Calibration Requirements	152
ASTM Enhanced Mechanical Qualification	154
Qualification of Other Compendial and Non-Compendial	
Apparatus	158
References	160

8 DISSOLUTION METHOD DEVELOPMENT: COMPENDIAL AND REGULATORY CONSIDERATIONS 163

Intrinsic Dissolution	163
Disintegration Testing	164
Rupture Testing	164
Variations of Methods, Including Equipment	165
Checklist of Questions for Method Development	165
Selecting Methods for New Drug Entities	167
Poorly Soluble Drugs – Inadequate Sink	168
Biorelevant Media	170
Low Concentrations – Difficult Analyses	171
Problematic Dosage Forms	172
Suppositories	173
Veterinary Dosage Forms	173
Small Bead-Type Extended-Release Preparations & Microspheres	174
Long-Acting Parenterals	174
Transdermal Patches	174
Soft Gelatin Capsules	175
Amorphous Solid Dispersions	175
Medicated Chewing Gums	176
Floating Dosage Forms and Sinkers	176

Change in pH During Testing	177
Making a Good Dissolution Profile	178
Adding Enzymes to the Medium to Address Cross-Linking	178
Comparison of Various Dissolution Apparatus	179
Challenging the Discriminatory Power of the Dissolution	
Method	184
Linking In Vitro Data to In Vivo Data	184
In Vitro and In Vivo Correlations (IVIVC)	184
In Vitro and In Vivo Relationship (IVIVR) and Mapping	185
Modeling and Simulations	185
Bioequivalence and Biowaivers	186
Clinically Relevant Dissolution Specifications (CRDS)	186
Emerging Technologies	187
Fiber Optics	187
Continuous Manufacturing	187
Ultraviolet Imaging	188
Biphasic Dissolution	188
3D Printing	188
Inhalation Product Dissolution	189
Summary	189
References	189
9 METHOD VALIDATION	203
Accuracy and Recovery	204
Infinity Point	205
Specificity	205
Linearity/Range	206
Intermediate Precision (Ruggedness)	207
Method Precision (Reneatability)	208
Robustness	208
Filtration	209
Stability of Standard and Sample Solutions	210
Manual Tasting Varsus Automation	210
Sinkors	211
Analytical Finish	212
Anaryucar Fillish Computer Softwara	21J 212

Nietnod Transfer Considerations	214
Other Validation Considerations	215
Keterences	216

10 AUTOMATION OF DISSOLUTION TESTING 217

Unit Operations in Dissolution	219
Automation of Setup	221
Deaerated Media	221
Washing or Replacing Dissolution Vessels and Filters	222
Automation of the Dissolution Process	224
Introducing the Dosage Form	224
pH Change	225
Monitoring Values	225
Automated Sampling	226
Classification of Automated Sampling Systems	227
Collect-Only Systems	229
Detect-Only Systems	230
Collect and Detect Samplers	231
Fiber Optic Systems	232
Hidden Problems with Automated Samplers	233
Sample Probes	233
Pumps	233
Filters	234
Evaporation	235
Degradation Products	235
Automating Analytical Procedures	235
Data Reduction in Automated Dissolution	236
IIV Absorbance	236
HPLC	236
Data Format	237
CFR Title 21 Part 11	237
Laboratory Information Management Systems	237
Automating Alternative Dissolution Methods	238
Summary	238
Deferences	230
Keleiences	240
